who told us they need a glossy stock to make their inkjet web presses more

GE'12 UPDATE

MITSUBISHI PAPE<u>R MILLS</u>

Thermal DigiPlate™ processless and chem-free CTP media was used to print an illustrated fishing guide on a BaumPrint 18 press live at the show.

Kunio Suzuki, President and Chief Executive Officer of Mitsubishi Paper Mills, accepts 5 Diamond Rating for SWORD iJET 4.3 Gloss from Don Burns, Business Development Director for Media at Kodak.

profitable. Mitsubishi R&D delivered on that need and we now have SWORD iJET, a premium coated inkjet media that supports the highest possible print quality from their inkjet presses," says Catherine Cartolano, Vice President, Sales & Technical Services, Mitsubishi Imaging (MPM), Inc.

SWORD iJET production inkjet media's glossy surface dries quickly and provides excellent color and ink absorption. With SWORD iJET Mitsubishi has answered the market demand for a truly high quality, glossy stock able to run at the high speeds of today's inkjet presses.

SWORD iJET Gloss Awarded a 5 Diamond Rating by Kodak

Kodak awarded SWORD iJET Gloss a 5 Diamond rating on the Paper Rating Program for KODAK PROSPER Presses, the highest rating within the Paper Rating Program. Kodak's 5 Diamond rating is awarded to a media that equates to "offset quality" within the rating structure. Mitsubishi Paper Mills (MPM) collaborated closely with Kodak in the U.S. and Japan to develop a product which meets such a high rating distinction. READ MORE >

Mitsubishi Imaging Participates in NAPL Owners Conference

This year at the NAPL Owners Conference, V.P. of Marketing, Operations and IT, Jillian Acord, and V.P. of Sales and Technical Services, Catherine Cartolano, met with business owners in the print industry. Many discussions at this year's NAPL conference focused on the business environment and challenges print owners are experiencing. To continue to grow, many print company owners say they have focused on value added services and have adopted a hybrid print strategy, utilizing both digital and offset print technology to best serve their customer base.

"Computer-to-plate and digital presses are not an either/or scenario," notes Suzanne Bostick, senior product manager for the Thermal DigiPlate[™]. "Savvy printers are benefiting from the flexibility to choose the most cost-effective technology to do the job." Bostick adds, "Many printers talk about the challenge of how to price and estimate the cost of the different technologies. When substrate, quality and job length could be executed well from either technology, how quickly a printer can get a plate to press is a big factor is establishing the tipping point at which our customers prefer CTP over digital printing."
