

Commercial Inkjet Media

Mitsubishi manufactures a wide variety of high quality inkjet media specifically designed for industrial inkjet printing and today's high speed inkjet presses. Our newest introduction is SWORD iJET 4.3 Gloss, a premium grade, high quality gloss coated production inkjet media. We offer a variety of grades in different formulations and application weights, in both coated and treated papers, for suitability in all business, commercial, photo and transpromo applications.

Coated Papers

Our coated media is available in matte and gloss finishes. These papers feature an ink-receptive coating that helps control critical factors such as surface gloss, smoothness, whiteness, stability as well as ink absorption of the print medium. With our high quality coated papers, it is easy to achieve true color reproduction, fast drying time and high line sharpness for a variety of industrial inkjet applications.

Treated Papers

Our treated papers allow ink to quickly adhere to the paper and not bleed through to the base. These economical papers come in various basis weights that are well-suited for business forms and other business printing applications.

Introducing SWORD iJET 4.3

This new Mitsubishi premium product answers the market's demand for a truly high quality, glossy stock able to run at the high speeds of today's continuous feed inkjet presses.

SWORD iJET 4.3 media has a coated, glossy surface that dries quickly and provides excellent color and ink absorption making this media ideal for high quality color graphics.

Sustainability

Our parent, Mitsubishi Paper Mills, has a sustained commitment to environmental stewardship and a keen sense of social responsibility while ensuring the highest quality production and precise inkjet processes. FSC certification is available for all Mitsubishi commercial inkjet papers. Contact your Mitsubishi Imaging Sales Representative for details.
